

X-STORE® GAS CONTAINER MODULES, DRAINAGE SYSTEM

FOR A CLEANER AND SAFER OPERATION

HEXAGON

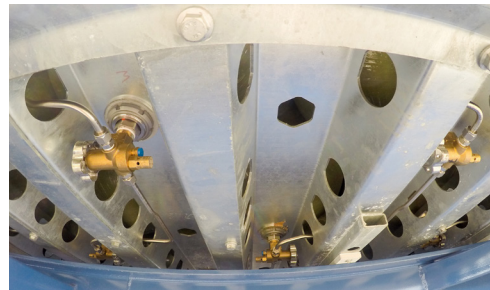

Depending on the composition of the CNG, liquids could build up over time in the bottom of the cylinders. This will lead to increased total weight and a loss of transport capacity.

Our optional drainage system allows for a trouble-free way to get rid of any unwanted water. In order to remove the liquid, the cylinders must be drained.

Hexagon's drainage system consists of piping at the bottom of the container which essentially mirrors the piping of the gas system at the top of the container. The piping meets at a single point, making draining straightforward. This system is intended for frequent drainage.
